The most rapid and perfect in cultivation, and I think I can say without contradiction that no dealer in the United States of the world grows more or better radishes than the author of this improved variety, which he has named and introduced under the name of "Finch's Radish." He has modified the natural size and shape of the radish, and charge my customers for a six-cent packet, instead of five cents, for one of the finest conical, or long, radishes. I do not think it so useful for the purposes of the radish to be round and short, but to have a firm and clear stem, as these round and short radishes will not last long. The chief value of this radish is its great size and quality. It is a large variety, and the radish will grow and ripen in any climate, and will last long. The radish is a very useful and important crop, and it is cultivated in all countries. The radish is a great favorite with the people, and it is eaten in many ways. It is a very valuable vegetable, and it is used in the making of many dishes. The radish is a very healthy vegetable, and it is said to be very nourishing. The radish is a very popular vegetable, and it is much used in the making of dishes. It is a very useful and important crop, and it is cultivated in all countries. It is a very healthy vegetable, and it is said to be very nourishing. It is a very popular vegetable, and it is much used in the making of dishes.

NEW BRAZILIAN FLOUR CORN

A rare variety of Indian Corn, with a white, floury, grain, yielding when ground a flour equal to every other best wheat flour, and making the best bread, cake, etc. It grows rapidly, ripens moderately early, with corn ready to thrash, make flour, etc., in about ten weeks. For all purposes it is admirably adapted to the ground line where, not to ten miles from a grain, bearing anv early variety to the stalk, making it wonderfully productive, yielding at the rate of seventy-five bushels per hundred of the corn. The plant is very strong and compact, with a few husks and very few ears. It will bear with ease and produce a hundred bushels of these that of wheat. It should be cultivated alike as other best corn. For baking or roasting it is equal to the best varieties of sugar corn, being very rich, sweet and juicy when well ripened. By mail, per packet, 35c.; ten, 3.75c., 25c.

MAMMOTH SILVER KING ORANGE.

We have imported this seed, the truly mammoth variety derived from the original in Italy. It was first introduced into this country last spring, and its fruit being of considerable size, shaker remarkably well, and has been much noticed. The fruit weighs from five to ten ounces each, and of a deep bright red color. It resembles in general the Mammoth King Orange. By mail, per dozen, 75c.; per hundred, 7.50c.; per thousand, 75c.

NEW RED CHINA SQUASH

We are inclined to consider the "Florina King" for the best China to the market. Each squash comes from five to thirteen fruits, and are remarkably uniform in size and shape. They weigh from 3 to 25 pounds, and from one to four bushels of various squashes. The skin is striped with the most delightful colors, and the flesh is firm and juicy. Very productive, and will keep if kept in dry and cool places. It thrives in the extreme north and south. By mail, per dozen, 40c.; per hundred, 7.50c.; per thousand, 75c.

GOLDEN HUSK OR STRAWBERRY TOMATO

This remarkable fruit is unequalled for canning, preserving, pies, etc. They are very handsome, bright golden color, extremely productive, and will keep if kept in the bush till winter. They should be in every garden and with all the various shapes of fruit which is known, or likely to be. The seed is slow to germinate, but grows very freely. Packet, 25c.

NEW CHAMPION MARKET MUSKMELOON.

Our new Short-Stem Drumhead Cabbage

The New Short-Stem Drumhead cabbage, a wonderful invention, all desirable qualities. It has a very large head, very compact—so compact that the leaves all紧凑 to form the head, with very few loose leaves; thus allowing the plants to be set close together. The heads are extra thick, firm, solid, and ready for market, and can be eaten for about six weeks after the heads are cut. They are large, compact, and productive, and will make the best small head cabbage. By mail, per dozen, 75c.; per hundred, 7.50c.; per thousand, 75c.

QUEEN OF GOLDEN POP CORN.

This handsome new pop corn was sent to us by a gentleman in Indiana, who writes,—it is so far ahead of all others I have ever tried, as to be beyond comparison. It is productive, uniformly in every respect, and yields, in my experience, an average of about 25 bushels per acre, the yield of the best and most productive. It is the result of many years of careful selection of the finest qualities. It thrives exceedingly well when wintered, together with its delicious and delicate taste. By mail, per dozen, 75c.; per hundred, 7.50c.; per thousand, 75c.

BRAZILIAN SUGAR SQUASH.

This delicious, new variety for summer and autumn use, is the offspring of many years of hard work and labor, and is the result of the most careful selection that could be made. It is uniform in all respects, and has a high yield. By mail, per dozen, 75c.; per hundred, 7.50c.; per thousand, 75c.

Kohls' Gem—are very productive, early maturing, 1 oz. $0.10, 2 oz. $0.20.
Finch's Early Perfection Potato.

The Value of a Productive Potate.

While it is generally known that an extra-early potato is the most profitable to grow in the account of its being placed on the market when the demand is at its highest, it is not known that early varieties, as a rule, do not take as good a grade and are less profitable. The "Early Perfection" is an extra-early variety, which will come through in all parts of the country in the proper season and make a most productive variety as well as extremely saleable. It is a fine potato, a very good potato, and a potato that is worth the consideration of all who are interested in the potato business. If it is not only obtained for usefulness, but for profit, all who try it will be pleased, for it is the finest potato ever grown, and will be a profitable one to all who grow it.

FRANK FINCH, R. R. No. 2, Clyde, Wayne County, N. Y.

The Value of an Early Potato.

The value of any potato is largely dependent upon the quality and quantity of the crop. The "Early Perfection" is an extra-early potato which will come through in all parts of the country in the proper season and make a most productive variety as well as extremely saleable. It is a fine potato, a very good potato, and a potato that is worth the consideration of all who are interested in the potato business. If it is not only obtained for usefulness, but for profit, all who try it will be pleased, for it is the finest potato ever grown, and will be a profitable one to all who grow it.

LIVINGSTON'S NEW BEAUTY TOMATO.

Another fine variety, coming from Mr. A. W. Livingston, the well-known seed dealer of the Ainslie, Paris, Perfection and Favor-

ite, from which we have obtained seed stock last sea-

son. In growing the be-

tifully, it is seen very distinctly from all former introduc-

tions. It is without doubt the handsomest variety ever introduced; grown in clusters of four or five tops and fruit of a glossy crimson color. During the past season of growth,

under various circum-

stance and different soils, it has shown no signs of bot-

ting. It reaps with the 

Acme and Perfection, 

in entirely free from blight and common rust, being perfectly 

shape. For ship-

ping and early market it cannot be equalled on ac-

count of its beauty, tough-

ness, and especially on ac-

count of its color, as it can be picked quite green, with 

look well and ripen 

directly. Per packet, 10 cts.; three for 30 cts.

NEW MUSK MELON.

This new variety originated with one of our best growers in South Jersey, and is pronounced by him the most prolific table variety he has ever grown. He realized an average of twenty cents each for entire crop the last season, as they were eagerly sought after at Philadelphia markets on account of their oddity and shape and appearance. They grow from 1 to 3 feet long, are very productive, with deep yellow flesh, of good quality, by many preferred to any other variety, and a great curiosity. Pkt., 30 cts.; drills for 3.00 cts.

A NEW MUSK MELON-THE PRINCESS.

While the previous section dealt with the new Tomato varieties, this section introduces a new variety of Melon called the "NEW MUSK MELON-THE PRINCESS." This melon is known for its beauty and unique shape, distinguishing it from other melons. The description emphasizes its attractive appearance and the high demand it received in the field and market. The melon is noted for its distinctive shape, which is considered a curiosity among gardeners and consumers alike.
STOKES' EXTRA EARLY MELON.

This new melon isribbed doubly, the outtest is all. Our illustration, made from a photograph, shows the inside, which is nearly round, dark green skin, slightly mottled with white. The flesh is deep scar, and in delicacy and flavor it is unsurpassed by any other variety. Their average weight is about 8 pounds. We recommend our customers one and all to try this great little melon, as it is certainly a valuable acquisition. 1c each. 10c per doz.; 50c per bushel.

Wm. Ross, a large melon grower of Swindon, N.J., says: "Your Stokes Early Extra is the cuttest, handsomest and best I have ever grown.

PARKS BEAUTY—Deep Scarlet Radish

This hand-some variety, which we now offer our customers, originated in France and is by far the most popular early radish ever sold in the United States. Its round shape is both decorative and practical. It is a mild, deep scarlet root, white flesh, very saucy and crisp. Large quantity. 1c each, 5c per doz.

NBSIT'S VICTORIA TOMATO.

This is a new English variety which we are growing at the bottom of the interroads, in Lycoming Co., and having tested its fine quality on the table we recommend it both for home consumption and very solid, fine flavored meat. The fruit is pyriform, and grows in bunches, each bunch containing from 8 to 10 small, bright red fruits. It contains but very few seeds, and the flavor is unsur- passed. It is very early, hardy, and of extraordinary productivity. While too small for general use, it will grow very attractive for table decorations, or for preserves. Per pt., 10c.

NEW MAMMOTH ONION—SPANISH KING

For several years past we have been endeavoring to get seed of the celebrated Spanish fancy onions which are annually imported into the United States from Spain and sold by confectioners and fruitmen in our large cities at from twenty to fifty cents each, and even higher. Last year we succeeded in securing a small quantity of this seed, which we sent out for trials to some of our leading onion growers and market gardeners. The onion grown here quite rival the imported ones, in great beauty and enormous size, weighing in many cases from three to five and a-half ounces each, equaling in size and beauty the River Street, Giant Brown, Pioppet, and other fine Italian sorts. The handsome specimen of Spanish King, from which our growing was made, weighed three and one-half pound. The outside skin is of a rich yellow color, while the flesh is white, and so sweet, mild and tender that you can eat raw like an apple. The soil we offer we have imported from a reliable grower at high cost. As we were only able to get a limited quantity, and desiring to give it wide distribution, we cannot sell more than one ounce to any one purchaser. We hope, however, that every customer who grows an onion will include at least a packet of the wonderful Spanish King in their order. Packet, 1c each; 10c per doz.

NEW EXTRA EARLY EXPRESS CABBAGE

"Excels in earliness: all the sorts we have grown, has the shape and appearance of our well-known Express cabbage, but is smaller, and eight or ten days earlier; has but a few outside leaves, and therefore may be planted very close and yield large crops; for forcing, can hardly be surpassed." Above is the description of the Express Cabbage as sent out of France last year by the introducers of the Express Cabbage, now so popular, although so highly endorsed, we hold to the established rule of "letting all things" and intend the seed only for trial and for raising a few customers in various states. The reports received from the sample packets thus distributed have been very favorable, and we are convinced that The Extra Express is at least a month earlier than any other early cabbage. Per packet, 15 cts.; 1 pt., 25 cts.

Horsford's Market Garden Pea.

This new wrinkled pea is the result of a cross between the "Chinese" and "American" wrinkled peas, and has come to the market as Horsford's Market Garden Pea. The seeds are small, but very fine, and dark green, and have been counted on a single plump. Twenty seeds weigh nearly a penny. The peas are more tender than the plain or smooth kinds, and very superior in quality. On the green market of the Pacific coast, where they are already extensively grown, and sold under various names, they have been sold at 15c to 20c the lb., retailing. Price, per pound, 30 cts.; per dozen, $1.25.

ANGEL OF MIDNIGHT CABBAGE.

This is a promising new Early Yellow Fruit variety, originating in Wisconsin. Very valuable and reliable authority, the "Brutus," New York State, says for this variety, "a most interesting improvement. Not only has it a great size, but it does much better in the market. A strongly grown part."

NEW SELF-HUSKING CORN.

The new self-husking corn is a most interesting invention, and is the result of years of hard labor and observation. The seeds are very strong and will grow to a good height, but the husks are so tight and close that the grain is never injured in any way. It is exceedingly strong and rich, being unusually rich in the stalk and end, and is very prolific. It is also very hardy and will grow in any good soil. It is a very productive, vigorous producing three bushels to the stalk. Packet, 50 cts.; 1 pt., 35 cts.; quart, 50 cts., peck, 1.00.

Genuine Sure-Head Cabbage.

The new Eckert's Sure-Head Cabbage is a great favorite among all farmers and gardeners. It is a very hardy variety and will stand the worst weather. It grows larger and heavier than any other variety, and the heads are well shaped and very beautiful. A large market is already made for the Sure-Head Cabbage. Per packet, 15 cts.; 1 pt., 25 cts.; 1 qt., 35 cts.; 1 peck, 1.00.

Genuine Sure-Head Cabbage.

Therefore doth require, and deserves, the attention of every element in all branches of the community. While the Sure-Head Cabbage is inferior in size to the regular One-Half Bushel, it is superior in quality and shape, and is a most desirable variety for market purposes. It is a favorite with market gardeners, and the heads are always of a very uniform size. Per packet, 15 cts.; 1 pt., 25 cts.; 1 qt., 35 cts.; 1 peck, 1.00.

Address all orders to FRANK FINCH, (Look Box 2), CLYDEWAY, W VA, N Y.
WHITE "BOX" RADISH.

This variety is much superior and entirely new and distinct from any early white turnip radish heretofore offered by the trade. Its points of superiority are remarkably short top, rapid growth, perfect turnip shape, extra fine quality, and showing no disposition whatever to become pithy with age, but on the contrary, remains solid and juicy longer after full growth. Its short top and rapid growth, especially fine for forcing under glass, in frames or boxes. Its roots come as well as any sort on squares of boxes or before the open ground. Owing to its very fine flavor, it is also a great boon in closing the boxes for market.

In fact, it is the only root of its kind which can be said to be both choice and productive. A large box of these can be grown in the same space of the soil as any other, which makes it peculiarly valuable for those who are obliged to leave those spaces in forcing under various vegetables under glass.

New Golden Self-Blanching Celery.

The increased interest taken in the culture of celery makes the introduction of a new variety composing really imperious merit, valuable not only to market gardeners but also to the home garden. The Golden Self-Blanching was first introduced last year, when we gave it a liberal notice, it is adopted almost everywhere. It has fulfilled all that was claimed for it, and can certainly be recognized as a most important acquisition. The great excellence of the plant with its close habit, compact growth and upright, starchy, as in fact, the desire of the literature. This variety is perfect solid, even, brittle and of delicious flavor. It can be grown in any locality, and, under all varieties of cultivation, will make the most delicious celery. This celery makes a very tender vegetable. Without backing up or exercising whatever, on the contrary, it becomes a handkerchief, fresh, yellowish white celery. The leaf is large, good, and at a bushel, 25 lbs.

Tennessee Sweet Potato Pumpkin.

Of medium size, light colored, good to very good eating, white, highly flavored, and a good keeper. The skin is dark, the flesh pale, sweet, and fine. This potato pumpkin is a general favorite and a perfect winter food. It is an excellent breaker, and keeps well throughout the winter.

$10 CASH FOR HAPPEST GROWN IN 1889.

This is without doubt the largest variety of pumpkin ever introduced in this country, indeed no other variety has ever been offered which has been grown and tested as many times. This pumpkin was grown from grownî in 1883 was 45 lbs., in 1884 140 lbs., in 1885 235 lbs. These Pumpkins have been grown in France in market for sale, and one of our customers, having a good one last year, with it, he will sell in 1887, or anywhere else on the face of the earth. I have no reason why they cannot be grown here, but as large is to grow an American pumpkin, in the finest locality, and one that will make a good and solid, almost all experiments were sent out by us before September 20th, 1883, with these pumpkins. You would easily grow this pumpkin even in your own garden, he will want 10, 15, or a portion of seed, the size of prize. The Borderland of this monstrous pumpkin is of a bright golden color, very desserted, of excellent flavor and in addition to its enormous size, it is one of the very perfect for pies. In all other ways, and is one of the best seed ever offered.

ACME OR BALTIMORE CANTALOUP.

Oak-Leaved Lettuce.

This is a splendid new variety of lettuce is the oak-leaved head. The broader part set to the ears and pointed to the tip, this is a very handsome and attractive appearance. The leaves are of a light green color, slightly crinkled and of rather a coarse texture, but, of slightly bitter taste. It is very slow in coming to bloom and in the month of July remains in bloom for a month before its shoots appear. Per pkg. 10 cada.

LONG GREECEAN CUCUMBER.

LARGEST, HANDSOME AND MOST PRODUCIVE OF ALL.

NEW PEPPER, MAMMOTH GOLDEN QUEEN.

This splendid new sort grows to the huge chesapeake bay pepper or hot, very productive, with large, smooth, and perfect shape, and has very few seeds, as shown in the illustration; quality excellent. It is very prolific and does well in the open ground. Amateurs denote this new variety for exhibition or table use will find this variety unsurpassed. Per pkg. 10 cts.
